PROCESS: PURCHASE REQUEST HANDLING (FICTIONAL TEST FIXTURE)

Owner: Operations. Version: 1.0. This is invented for software testing.

1. The requester submits a purchase request and its budget reference to the manager.
2. The manager reviews the purchase request and checks the budget reference.
   INPUTS: purchase request; budget reference. OUTPUT: review result.
3. DECISION: Is the request approved?
   YES: The manager records the approval. OUTPUT: approved request.
   NO: The manager notifies the requester. OUTPUT: rejection notice.
4. Both branches terminate when the process completes.

AMBIGUITY TO TEST: In some cases, the request may need another review.

The text does not say who initiates it or when. Do not invent this step.
